

Please send us a quotation for a supply of the following product(s):

TYPE:	QUANTITY
RespiPro VK	_____
	state the requested quantity

Please be aware that we can only provide from a minimum order of 1 pallet / 40,000 pieces

FEATURES:

- Nanofiber filter with 99.9% filtration efficiency for viruses and bacteria.
- First respiratory protective equipment enriched with accelerated copper oxide.
- Intercepts viruses and bacteria mechanically and it actively kills them as well.
- Can be worn repeatedly and for a longer time, 24 hours at maximum. Thanks to the deactivation of viruses there is no risk of their further reproduction in the filter.
- Complies with the requirements for protective equipment for professional use of class FFP2 of standard EN 149.
- The combination of nanofiber and copper oxide effectively protects you from the coronavirus.
- "duck shape" ensures best face-fit and even offers high comfort with regard to its breathability at the same time.
- Offers better conditions for its wearer while speaking.
- Accelerated copper oxide gives the nanofiber respirator a natural skin-like color so when a person wears it in the street, it will create rather a civilian than a medical look.
